SetEdit (Settings Database Editor) The official app & game Distributed by ApkOnline SCREENSHOTS DESCRIPTION Run this app named SetEdit (Settings Database Editor) or download it using ApkOnline. You can do it using our Android online emulator. WARNING -- We do not guarantee that problems caused by the improper use of this utility can be fixed, and we are unable to help you with any such problems. We support only this app, not your device's system software. Settings Database Editor (SetEdit) is invaluable if you need it, but if you're not careful you're very likely to mess something up. By default, for your protection, Android prevents you from modifying the SECURE and GLOBAL tables. If you have Android Jellybean or later, you can remove this protection from an ADB shell using the command "pm grant by4a.setedit22 android.permission.WRITE_SECURE_SETTINGS". On earlier versions, you can only remove this protection on a rooted device by installing SetEdit to the system partition. Android Q and later will ask you to "check for update". Please ignore this. We can't stop this warning without reducing SetEdit's functionality, and we will not do that. Run or download SetEdit (Settings Database Editor) using our android online emulator from ApkOnline.net ADDITIONAL INFORMATION: Developer: 4AGenre: ToolsApp version: 2018.10.31App size: 110kRecent changes: * Android Q and later will ask you to "check for update". Please ignore this. We can't stop this warning without reducing SetEdit's functionality, and we will not do that. v2018.10.31-* Added support for the SetEdit Community Translation Project* Due to Google Play policy changes, for the foreseeable future, there will be no more updates to the main SetEdit app. All future updates will come in the form of addons, such as the Feature Pack and the Community Translation Project. Comments: Without a doubt a good system editor. Somewhat limited, but still shows values of content that's not editable. I like the features I can edit. Just remember to Screenshot stuff before edit. It could prevent a factory reset. Doesn't have permission to edit the global table so it's misleading, now sensitive information will be locked forever!! Thanks :c Awesome app! Just having the list to see what the settings are is super good, being able to adjust once you ADB privilege? Fantastic! Having the startup guardian if you purchase the add-on, brilliant! Man, thank you for your work on this!

Best reply to an app review ever!!! Ask your grandchildren for help." `Excellent editor! Used it for couple years to enable mobile hotspot by changing System Table "tether_entitlement_check_state" from a "1" to a "0" and then Global Table change "tether_dun_required" from a "1" to a "0". But now for some reason no longer work. When switch on Mobile Hotspot I get error says "Tether - Mobile number not found". Service Rep says everything good on my account & network settings. I don't think it's fault with this app. Still works on wife's phone which is same as mine!`. This app works wonderfully. It is clean, neat, and does exactly what it is supposed to do. I hope this gets more traction and positive attention from groups that appreciate and understand how to use such a powerful tool. I also enjoy the inclusion of the tables stored in the boot.img, even if they cannot be edited through the app. SetEdit (Settings Database Editor) APK version lists: SetEdit (Settings Database Editor) is Apps in Tools from 4A. This product available on Google play from 5 years ago and latest update on 2021-04-11, please visit SetEdit (Settings Database Editor) detail page to view more information of SetEdit (Settings Database Editor) APK. Page 6 Any Android user knows that one of the main advantages it offers when compared to others is that the operating system enables us to customize and set up functions. Set up your Android using the values in its database SetEdit is basically a settings database editor. This means that instead of viewing a graphic and visual interface like the one we see in the settings menu or through a launcher, we will view tables that bring together different device settings values so that we can establish them manually. We are talking about all the settings related to the device and that can go from volume control parameters for specific situations to memory assignment for carrying out certain processes. The app also enables us to create new settings, which means we will be able to create customized configurations. However, this tool requires a certain amount of knowledge regarding Android functions, so if you intend to modify a setting without really knowing what you are doing, we recommend you don't, as you could really mess up the system. WARNING -- We do not guarantee that problems caused by the improper use of this utility can be fixed, and we are unable to help you with any such problems. We support only this app, not your device's system software. Settings Database Editor (SetEdit) is invaluable if you need it, but if you're not careful you're very likely to mess something up. By default, for your protection, Android prevents you from modifying the SECURE and GLOBAL tables. If you have Android Jellybean or later, you can remove this protection from an ADB shell using the command "pm grant by4a.setedit22 android.permission.WRITE_SECURE_SETTINGS". On earlier versions, you can only remove this protection on a rooted device by installing SetEdit to the system partition.
